DETAILED ACTION

1. The amendment filed October 11, 2002 has been received and entered.

Information Disclosure Statement

2. Applicant's prior art citation filed July 15, 2002 has been received, considered and placed of record.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 23, 25-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Witek et al.

As per claim 23, Witek et al. teach a computer apparatus comprising a processing unit, and a communication unit in communication with the processing unit, operable to transmit and receive information regarding a second account identifier for use in place of a first account identifier (see Figures 1 and 2) (column 4, line 55- column 7, line 42). Witek et al. do not mention explicitly a memory device. However, Witek et al. teach multiple databases (20) (see Figure 1) containing data representing a plurality of predetermined account identifiers, and data representing status for each of the plurality of predetermined account identifiers (column 11, line 40- column 20, line 62).

Art Unit: 3628

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to realize that the system, as taught by Witek et al., contains a memory device (databases) connecting to the processing unit and the memory device contains data representing a plurality of predetermined account identifiers, and data representing status for each of the plurality of predetermined account identifiers. In addition, Witek et al. also include a program adapted to be executed by the processing unit to receive the second account identifier, compare the second account identifier with at least one of the plurality of predetermined account identifiers to identify account identifier matching the second account identifier, and verify the second account identifier in accordance with the comparing step and the data representing status of the one predetermined account identifier (in this case is to look for a specific advertisement).

As per claim 25, the claim contains features addressed in the above claim, and therefore, is rejected under the same rationale.

As per claim 26, Witek et al. teach a means for receiving a plurality of second account identifiers and each second account identifier is being different from the remaining second account identifiers, and verifying that each of the plurality of second account identifiers indicates a first account identifier, wherein each of the plurality of second account identifiers comprises a second identifier or use in place of a first account identifier (column 12, lines 3-9) (column 12, line 27- column 13, line 29).

As per claim 27, Witek et al. do not mention explicitly the account identifier comprising sixteen digits. It would have been obvious to one having an ordinary skill in

Art Unit: 3628

the art to set an account identifier at predetermined digits according the size of the parameters defined in the database.

Allowable Subject Matter

4. Claims 16, 19 and 28-44 are allowed.

Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Maynard, Kaufman, Loofbourrow et al., and Hansen are cited to teach multiple account identifiers.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thach H Bui whose telephone number is 703-305-0063. The examiner can normally be reached on Monday-Friday, 7:30-4 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hyung S. Sough, can be reached on 703-308-0505.
